Fibrenergy®

Fibrenergy® is a high fat, high fiber, low starch textured feed for performance horses and in other feeding situations, or special needs.

Soluble fiber from beet pulp and soy hulls, combined with oil, provides long lasting, slow energy release and for controlled performance. Fibrenergy also includes the highest-quality chopped North American timothy and alfalfa. Fibrenergy is highly palatable, ideal for horses that require a high caloric intake, but reduced protein. It's a calorie dense, "non-heating" feed perfect for horses that are difficult to handle or mentally too "high."

Veterinarians and equine hospitals utilize Fibrenergy as a post-surgical ration. It is widely recommended for horses convalescing, horses recovering from gastric upsets, or as an overarching ration for the difficult to care for case. The high fiber and high fat content, combined with the removal of the majority of starch, provides these doctors with a safe and effective feed for all classes of equine.

Feeding Instructions

This feed is a fully fortified ration. It is not necessary to add additional protein, vitamin or mineral supplements if this feed is fed as directed. Feed at the rate of 6-18 pounds per day depending on the intensity of the work, size and body condition of the horse. If individual feeding level drops below this minimum, consult Hallway Feeds on the use of a protein, vitamin, and mineral supplement, i.e. Stamm 30®. This feed is designed to be offered alongside forage to provide a balanced diet and to do so should be fed with a minimum of 1.5% of bodyweight per day of high quality forage (hay, pasture, hay cubes). Always provide a clean, fresh source of water and free choice salt. Contact Hallway Feeds or your local dealer if you have any questions about the use of this product.

- HIGH FAT, HIGH FIBER
- PSSM OR EPSM
- LOW NSC, NO CEREAL GRAIN
- RER
- HARD KEEPERS
- SENIORS NEEDING A FIBER-BASED FEED
- METABOLIC OR CUSHINGS
- POST SURGERY
