Provide clean, fresh water and free-choice salt at all times. Forage values are suggested intakes based on good quality forage. The quality and digestibility of the forage is variable and dependent on the maturity of the plant at harvest. Horses older than six months should be fed at least 1% of body weight as forage to maintain gut health. If additional calories are needed, do one of the following: 1. Add ULTIMATE FINISH[™] 25, 40 or 100. 2. Incorporate additional BUCKEYE[™] Nutrition feeds. Contact BUCKEYE[™] Nutrition for additional feeding recommendations.
